

▶ JOHN ZINK'S *WindPROOF* InstaFire

The Industry's Choice for Safe, Reliable Flare Ignition

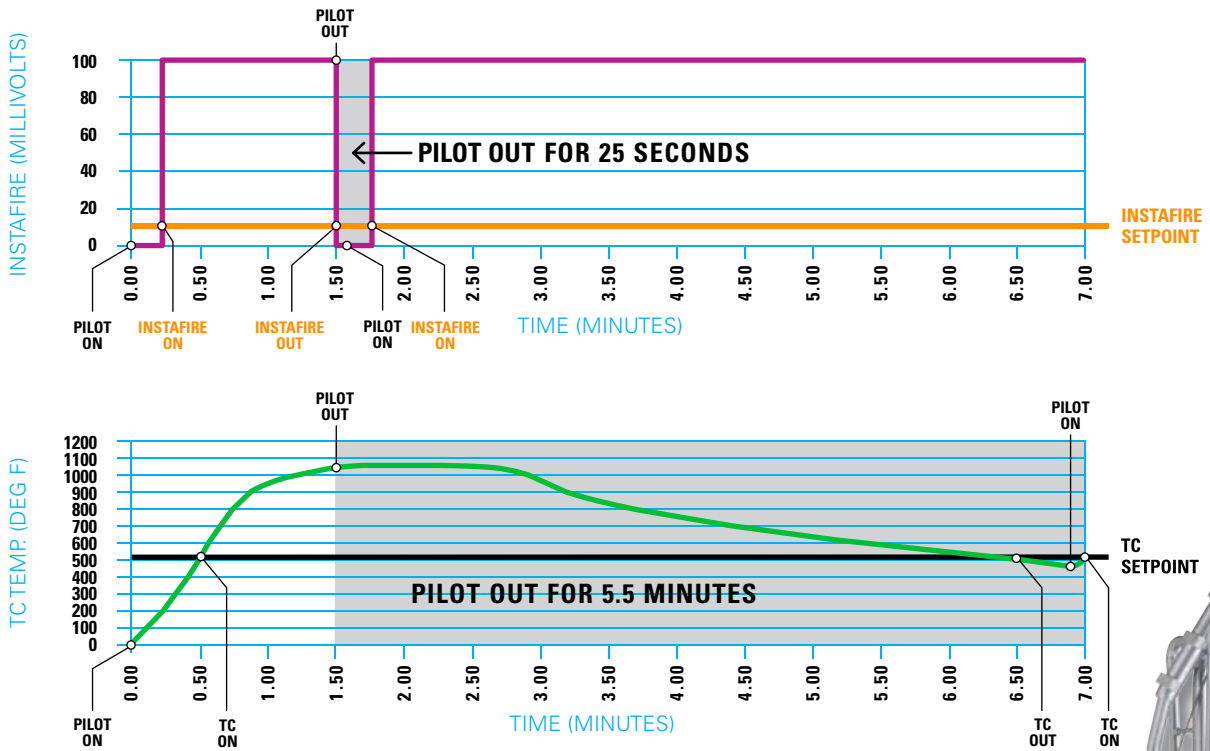

At John Zink Company, we understand that a single pilot failure can bring your operation to a sudden, expensive halt. That's why we designed our InstaFire ignition system to include our patented *WindPROOF* technology – a proven technology so stable it operates even in the most extreme conditions.

Every InstaFire system is engineered with a rapid response capability and three levels of detection and relighting redundancies. Flame detection and ignition are instantaneous, resulting in uninterrupted performance and safe, reliable operation.

*Patented

INSTAFIRE FAST RESPONSE ADVANTAGE

The InstaFire system can relight a pilot within 30 seconds after pilot failure, compared to thermocouples which take much longer and waste valuable time between pilot outage and re-ignition.

InstaFire system shown in simulated hurricane conditions.

PROVEN PERFORMANCE

John Zink's InstaFire system is stable in high winds and has been extensively tested under simulated severe weather conditions at our state-of-the-art Research, Development and Test Center. The conclusive research data and in-field performance results support our capability to accurately predict ignition system performance and eliminate risk for our customers.

Additional Features and Benefits

- Consumes as little as 45 SCFH of natural gas
- Exceeds API Standard 537 recommendations
- Long life
- Stainless steel materials
- Heavy duty construction
- Proven reliability in all wind directions
- Will fit most applications without modification

Improve the safety, reliability and performance of your system – contact John Zink today and put *WindPROOF* InstaFire to work for you.
